

INDEPENDENT ENERGY **SOLUTIONS** CORP.

W8 - Surefrac Safety System

Introduction

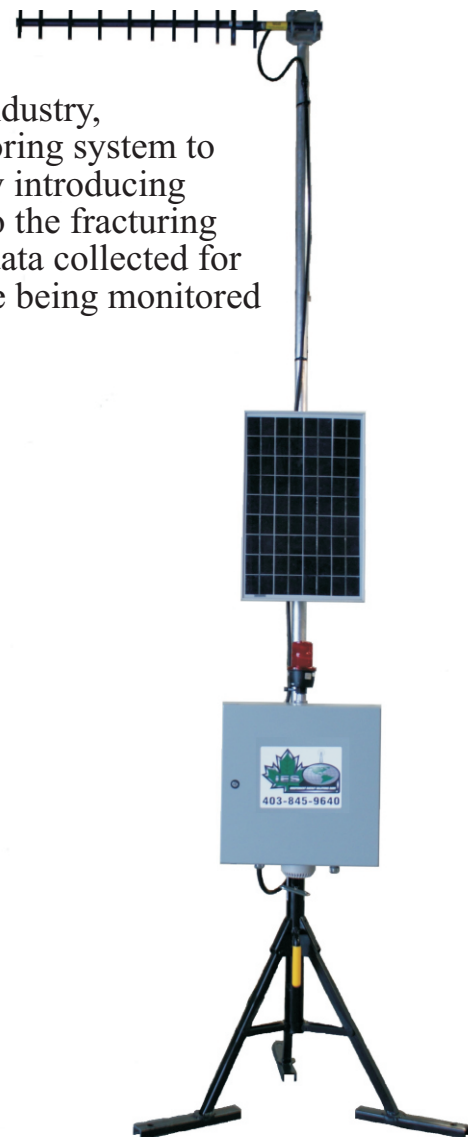

Due to the popularity of horizontal well fracturing in the Oil and Gas Industry, Independent Energy Solutions Corp has developed a proprietary monitoring system to protect the integrity of existing well bores and production equipment by introducing *Surefrac*. *Surefrac* is installed on existing well heads in close proximity to the fracturing operation. *Surefrac* detects any changes in pressures based on baseline data collected for each well; this information is then communicated between the well bore being monitored and the fracing operation.

Benefits & Features

- Cellular communication to transmit information
- Time intervals can be selected for pressure data updates
- All information is data logged and will be available
- Communicates through an audible/visual alert on site or remotely via IES Lynx website
- Multiple sensor configuration per system
- This live information will be available 24 hrs. a day on IES's Warm Technology web-site

Intellisite Ready:

- Industry leading web-based remote monitoring service
- Collects critical remote site data
- Converts instrument data into useable information
- Efficiently and economically manages data
